NOTE 3: This data sheet uses the algebraic convention, where the most negative value is a minimum and the most positive value is a maximum.

NOTE 4: Guaranteed by design.

NOTE 5: $\Delta r_{ON} = \Delta r_{ON(max)} - \Delta r_{ON(min)}$. On-resistance match between channels and flatness are guaranteed only with specified voltages. Flatness is defined as the difference between the maximum and minimum value of on-resistance as measured at the extremes of the specified analog signal range.
